

Product Data

Product:	Ovine Hybloc™ DNA
Catalog #:	OHB
Concentration:	1 mg/mL (A ₂₆₀)
Source:	Male Ovine Tissues
Storage:	-20°C

Description:

Ovine Hybloc™ DNA is the repetitive sequence fraction of genomic DNA obtained from male ovine tissues by extracting, shearing, denaturing, and reannealing DNA under conditions that enrich for repetitive sequences. Ovine Hybloc™ DNA may be effectively substituted for any other competitor DNA (e.g., COT-1 DNA®, salmon sperm DNA, genomic DNA, etc.) to suppress cross-hybridization to ovine repetitive sequences for *in situ* hybridization, Southern blots, microarray technology, or any other protocol requiring competition to block repetitive DNA from binding to the target. Hybridization with Hybloc™ DNA shows a marked increase in signal intensity and a significant decrease in the amount of background noise associated with repetitive DNA.

How Supplied:

Ovine Hybloc™ DNAs are supplied in various quantities at 1 mg/mL in 10 mM Tris-HCl (pH 7.4), 1 mM EDTA.

Quality Control Assay:

Determination of concentration from the A₂₆₀ and determination of the A₂₆₀/A₂₈₀ ratio (1.8 to 2.0); determination of molecular size: ≥80% of Ovine Hybloc™ DNA will run as a broad band between the 50 bp and 600 bp size range.
